

Worksheet#3

21/06/2023

Instructions for the exercise

1. Create a Java project and create a package with the name, classEx2, and construct a class under this package then name it as CheckPassword.
2. Write a complete program and a method from the given method header to determine the password validity.
3. Several tested passwords should be provided.

Given method header as follow:

```
public static boolean isPasswordValid(String password)
```

The conditions for password validity are:

- at least 8 characters
 - At least an uppercase letter
 - at least one digit
 - at least one symbol from {_,@,#,\$,/,&}
-
