Worksheet#5
05/07/2023

_____

Instructions for the exercise

Given a header of a method as follow:

public static char whoWin(char[][] tttBoard)

This method will determine the passed in two-dimensional array which is the representation of current tic-tac-toe board and return back 'O' if 'O' is winner or 'X' if 'X' is winner, otherwise 'N'.

Create a Java project, then create a package with the name, classEx4, and construct a **class** under this package then name it as **MyTicTacToe**.

1. Implement whoWin() method from the given information.
2. Complete the program by design and creating a tic-tac-toe game which allows two players to take turns playing a game.
3. You are required to use your method, whoWin(), to complete your tic-tac-toe game.
